

WALL LIGHT PIVOT

Designer

Anne Lutz

Description

Pivot is a wall light which associates freedom of use with simplicity of production. The idea arose from the observation that LED light is often unidirectional and without warmth. Made from lacquered sheet metal and given volume by three folds, it may easily be mounted on its wall support and then turned on its axis to offer more or less directed light. Directional shade in satin white lacquered folded steel.

Transparent cable. Transparent manual switch. 50 cm LED ribbon gives a total power of 6 W, emitting 627 Lumens (the equivalent of a 55 W incandescent bulb). Colour temperature 3,000 K (warm white). May be wired directly into a wall or hung on a wall with the cord draping downwards and plugged into a socket.
